APPLICATIONS GOVERNANCE

THE CORNERSTONE OF A SERVICE-BASED STRATEGY

Is an Argentine company specialized in the elaboration of foods, chocolates, cookies and ice cream at a multinational level that has 13 commercial offices in America, Europe, Asia and Africa. It also has 39 industrial plants located in Latin America becoming the main exporter of sweets in the region.

THE PROBLEM | UNIFYING INFORMATION

The company had the need to unify in a single application all the information stored and contained in: infrastructure services, applications, interfaces, resources and dependencies; until now it was not quantified or identified in a homogeneous way, lot of them with restricted access to certain IT areas.

EPIDATA SOLUTION

For this project, Epidata used the following management processes:

ANALYSIS

Our specialists in the area of consulting services made a deep and exhaustive survey of the information contained in the services and applications, as well as the company infrastructure. With this information we were able to identify the relationships, dependencies and interfaces between them.

SOLUTION

With the information collected we created "Mapa de Aplicaciones", Epidata’s own product, which consists in the development of a model that represents the software components, hardware and processes of the company along with its identified relationships.

IMPLEMENTATION

This solution allows the customer to have all the information stored in one place, under one application, and available for all IT areas that need to have access.
BENEFITS

UNIFYING ALL THE INFORMATION IN A SINGLE APPLICATION.

ACCESS TO INFORMATION IN AN AGILE AND CENTRALIZED WAY

MORE HOMOGENOUS TOOLS FOR ARCHITECTURE DOCUMENTATION

TIME OPTIMIZATION OF MANAGEMENT IT

GREATER FORECASTING FOR FUTURE PROJECTS
